#### **Dataset Description**

CTD data collected by NOAA/PMEL/EcoFOCI:
Northeast Pacific - Coastal Gulf of Alaska
Ecosystems & Fisheries Oceanography Coordinated Investigations (NOAA/PMEL/EcoFOCI)

Project Principal Investigators for CTD data:

Phyllis Stabeno and Nancy Kachel Nutrient data analysis: Calvin Mordy

#### Methods & Sampling

CTD data are from process cruises conducted as part of GLOBEC 2001-2004 in the Coastal Gulf of Alaska

#### **Data Processing Description**

BCO-DMO changed parameter names from original PMEL codes. Use the table below to interpret weather and sea-state codes.

| Code | EcoFOCI<br>e Sea State (ft.) | data: Weather<br>Visibility (NM) |               | e Codes<br>Weather    | Code |
|------|------------------------------|----------------------------------|---------------|-----------------------|------|
| 0    | 0.0 ft - glassy              | <00.02                           | cirrus        | clear                 | 0    |
| 1    | 0.0-0.3 ft - rippled         | 00.02-00.10                      | cirrocumulus  | partly cloudy         | 1    |
| 2    | 0.3-1.6 ft - wavelet         | 00.10-00.25                      | cirrostratus  | continuous clouds     | 2    |
| 3    | 1.6-4.1 ft - slight          | 00.25-00.50                      | altocumulus   | blowing snow          | 3    |
| 4    | 4.1-8.2 ft - moderate        | 00.50-01.00                      | altostratus   | fog, thick dust, haze | 4    |
| 5    | 8.2-13.1 ft - rough          | 01.00-02.00                      | nimbostratus  | drizzle               | 5    |
| 6    | 13.1-19.7 ft - very rough    | 02.00-05.00                      | stratocumulus | rain                  | 6    |
| 7    | 19.7-29.5 ft - high          | 05.00-10.00                      | stratus       | snow or rain/snow mix | 7    |
| 8    | 29.5-45.9 ft - very high     | 10.00-25.00                      | cumulus       | showers               | 8    |
| 9    | >45.9 ft - phenomenal        | >25.00                           | cumulonimbus  | thunderstorms         | 9    |

# **Parameters**

| Parameter     | Description   | Units              |
|---------------|---|--------------------|
| lat           | Latitude, negative = South.   | decimal<br>degrees |
| cruiseid      | Identifier of the cruise (e.g. $hx284 = R/V$ Alpha Helix cruise number 284).            | N/A                |
| year          | Year of the cruise in YYYY format.  | N/A                |
| cast          | Cast number.  | N/A                |
| lon           | Longitude, negative = West.   | decimal<br>degrees |
| julian_day    | Days since an arbitrary beginning. Used by PMEL's netCDF format.                        | N/A                |
| msec_since_00 | Milliseconds since midnight.  | milliseconds       |
| depth_w       | Depth of water at cast.   | meters             |
| station       | Station name.   | N/A                |
| water_mass    | Water mass code: B = Bering, S = Shelikof, G = Gulf of Alaska.                          | N/A                |
| weather       | Weather conditions code. 0-9 (0=clear); see table above under 'Processing Description'. | N/A                |

| sea_state    | Sea state code; 0-9 (0=glassy), see table above under 'Processing Description'.            | n/a                |
|--------------|--|--------------------|
| press_bar    | Atmospheric pressure as measured by barometer.   | millibars          |
| wind_dir     | Direction from which the wind blows.   | degrees True       |
| wind_speed   | Wind speed.  | knots              |
| visibility   | Visibility; code 0-9 (0= 25 nm) see table above under 'Processing Description;.            | N/A                |
| cloud_type   | Cloud type, code 0-9; See table above under 'Processing Description'.                      | N/A                |
| cloud_amount | Cloud cover amount, code 0-9; (0=clear, 9=maximum cover).                                  | N/A                |
| temp_air     | Dry air temperature.   | degrees<br>Celsius |
| depth        | Depth at which the measurement was taken.  | meters             |
| temp         | Temperature. PMEL name = T_28.   | degrees<br>Celsius |
| temp2        | Secondary Temperature; PMEL name = T2_35.  | degrees<br>Celsius |
| PAR          | Photosynthetically active radiation. PMEL name = PAR_905.                                  | uEin m-2 s-1       |
| flvolt       | Raw fluorometer reading in volts; from CTD. PMEL name = rFV_971.                           | volts              |
| trans        | Transmissometry from CTD. Measured as a percentage. PMEL name = Tr_904.                    | %                  |
| O2_umol_kg   | Dissolved oxygen calculated from CTD values. PMEL name = O_65.                             | umol/kg            |
| sigma_t      | Simga-t (kg/m^3). PMEL name = ST_70.   | kg m-3             |
| par_v        | Photosynthetically Active Radiation in volts (instrument units). PMEL name = PAR_916.      | volts              |
| flvolt2      | Voltage of Wetlabs wetstar fluorometer. PMEL name = VWS_975.                               | volts              |
| flvolt3      | Voltage of SeaPoint fluorometer. PMEL name = VSP_976.                                      | volts              |
| sal          | Salinity in practical salinity units (PSU). PMEL name = S_41.                              | PSU                |
| sal2         | Additional measurement of salinity in practical salinity units (PSU). PMEL name $= S_42$ . | PSU                |
| dynh_0       | Dynamic meters. PMEL name = DYN_10.  | meters             |
| fluor        | Sea Point fluorometer chlorophyll. PMEL name = fSP_974.                                    | ug/L               |
| fluor2       | Wetlabs wetstar fluorometer chlorophyll. PMEL name = fWS_973.                              | ug/L               |
| pressure     | Alternate measure of depth used in some cruises.   | meters             |

# Instruments

| Dataset-<br>specific<br>Instrument<br>Name | Anemometer   |
|--|--|
| Generic<br>Instrument<br>Name              | Anemometer   |
|  | An anemometer is a device for measuring the velocity or the pressure of the wind. It is commonly used to measure wind speed. Aboard research vessels, it is often mounted with other meteorological instruments and sensors. |

| Dataset-specific<br>Instrument Name | Barometer   |
|-------------------------------------|---|
| Generic<br>Instrument Name          | Barometer   |
|                                     | A barometer is an instrument used to measure atmospheric pressure. There are many types of barometers identified by make and model and method of measurement. |

| Dataset-<br>specific<br>Instrument<br>Name | Conductivity, Temperature, Depth  |
|--|---|
| Generic<br>Instrument<br>Name              | CTD - profiler  |
|  | The Conductivity, Temperature, Depth (CTD) unit is an integrated instrument package designed to measure the conductivity, temperature, and pressure (depth) of the water column. The instrument is lowered via cable through the water column. It permits scientists to observe the physical properties in real-time via a conducting cable, which is typically connected to a CTD to a deck unit and computer on a ship. The CTD is often configured with additional optional sensors including fluorometers, transmissometers and/or radiometers. It is often combined with a Rosette of water sampling bottles (e.g. Niskin, GO-FLO) for collecting discrete water samples during the cast. This term applies to profiling CTDs. For fixed CTDs, see <a href="https://www.bco-dmo.org/instrument/869934">https://www.bco-dmo.org/instrument/869934</a> . |

| Dataset-<br>specific<br>Instrument<br>Name | Meteorological Station   |
|--|--|
| Generic<br>Instrument<br>Name              | Meteorological Station   |
|  | MET station systems are designed to record meteorological information on board ships or mounted on moorings. These are commonly referred to as EMET (Electronic Meteorological Packages) or IMET (Improved Meteorological Packages) systems. These sensor packages record measurements of sea surface temperature and salinity, air temperature, wind speed and direction, barometric pressure, solar and long-wave radiation, humidity and precipitation. |

# Deployments

MF0105

## **Project Information**

U.S. GLOBEC Northeast Pacific (NEP)

Website: <a href="http://nepglobec.bco-dmo.org">http://nepglobec.bco-dmo.org</a>

Coverage: Northeast Pacific Ocean, Gulf of Alaska

#### **Program in a Nutshell**

**Goal:** To understand the effects of climate variability and climate change on the distribution, abundance and production of marine animals (including commercially important living marine resources) in the eastern North Pacific. To embody this understanding in diagnostic and prognostic ecosystem models, capable of capturing the ecosystem response to major climatic fluctuations.

**Approach:** To study the effects of past and present climate variability on the population ecology and population dynamics of marine biota and living marine resources, and to use this information as a proxy for how the ecosystems of the eastern North Pacific may respond to future global climate change. The strong temporal variability in the physical and biological signals of the NEP will be used to examine the biophysical mechanisms through which zooplankton and salmon populations respond to physical forcing and biological interactions in the coastal regions of the two gyres. Annual and interannual variability will be studied directly through **long-term observations** and detailed **process studies**; variability at longer time scales will be examined through **retrospective analysis** of directly measured and proxy data. Coupled **biophysical models** of the ecosystems of these regions will be developed and tested using the process studies and data collected from the long-term observation programs, then further tested and improved by hindcasting selected retrospective data series.

## **Program Information**

U.S. GLOBal ocean ECosystems dynamics (U.S. GLOBEC)

Website: <a href="http://www.usglobec.org/">http://www.usglobec.org/</a>

Coverage: Global

U.S. GLOBEC (GLOBal ocean ECosystems dynamics) is a research program organized by oceanographers and fisheries scientists to address the question of how global climate change may affect the abundance and

production of animals in the sea.

The U.S. GLOBEC Program currently had major research efforts underway in the Georges Bank / Northwest Atlantic Region, and the Northeast Pacific (with components in the California Current and in the Coastal Gulf of Alaska). U.S. GLOBEC was a major contributor to International GLOBEC efforts in the Southern Ocean and Western Antarctic Peninsula (WAP).
