## Data Files

<b>File</b>
<b>CTD_Stations.csv</b> (Comma Separated Values (.csv), 3.07 KB) MD5:e4c56107b413f69f4ff2b59f2052393a
Primary data file for dataset ID 3266

[ [table of contents](#) | [back to top](#) ]

## Parameters

Parameter	Description	Units
Cruise	Cruise Id	text
Station	Station Id (Station number.Cast number at station)	nn.xx
date	date sampling began	YYYYMMDD
time	time sampling began	hhmm
lon	longitude; negative denotes West	decimal degrees
lat	latitude; negative denotes South	decimal degrees

[ [table of contents](#) | [back to top](#) ]

## Deployments

### KM0703

<b>Website</b>	<a href="https://www.bco-dmo.org/deployment/58016">https://www.bco-dmo.org/deployment/58016</a>
<b>Platform</b>	R/V Kilo Moana
<b>Report</b>	<a href="http://www.rvdata.us/catalog/KM0703">http://www.rvdata.us/catalog/KM0703</a>
<b>Start Date</b>	2007-03-14
<b>End Date</b>	2007-04-18
<b>Description</b>	<p>The cruise began in Townsville, Australia and sampled the Coral Sea, a transect southward toward the Tasman Sea, and a transect northward toward New Caledonia, with twelve hydrostations (001-012). It then made a run eastward to 170 deg W, a northward run to 15 deg S, then a transect to the east before ending in Suva, Fiji after carrying out fourteen stations (013-026). Cruise information and original data are available from the NSF R2R data catalog.</p> <p><b>Methods &amp; Sampling</b> Generated from CTD profile file</p> <p><b>Processing Description</b> Generated from CTD profile file</p>

### SJ0609

<b>Website</b>	<a href="https://www.bco-dmo.org/deployment/58017">https://www.bco-dmo.org/deployment/58017</a>
<b>Platform</b>	R/V Seward Johnson
<b>Start Date</b>	2006-06-18
<b>End Date</b>	2006-07-31
<b>Description</b>	<p>Leg 1 of the cruise began in Ft. Pierce FL with a rapid transit to Bridgetown, Barbados and two hydrostations (001-002) en route. Leg 2 extended from Barbados to Mindelo, Cape Verde, with nine hydrostations (003-010, 012). Leg 3 included a run south to the equator, then northwestward to Barbados with eleven hydrostations (013-023).</p> <p><b>Methods &amp; Sampling</b> Generated from CTD profiles</p> <p><b>Processing Description</b> Generated from CTD profiles</p>

## Project Information

### **Biology and Ecology of Newly Discovered Diazotrophs in the Open Ocean (DIAZOTROPHS)**

**Coverage:** Tropical and Subtropical Southwest Pacific and tropical North Atlantic

### **Biology and Ecology of Newly Discovered Diazotrophs in the Open Ocean**

The productivity of the oceans is limited by the availability of nutrients, which has implications for the fluxes of carbon between the atmosphere and oceans. In a previous award the PIs found that previously unrecognized N<sub>2</sub>-fixing unicellular cyanobacteria are active and abundant in oligotrophic oceans. This finding has important implications for nitrogen cycling in the oceans and for the role of "new" nitrogen in carbon fixation.

The PIs will address three major issues:

First, there are at least two distinct groups of cyanobacteria that appear to be separated in space and time, due to unknown ecological variables.

Second, the geographic distribution and factors controlling the distribution are unknown, so it is not clear how these organisms should be included in biogeochemical models.

Finally, one of the groups of cyanobacteria appears to fix N<sub>2</sub> during the day,

which revives the enigma of simultaneous nitrogen fixation and photosynthesis that was previously limited to discussions of *Trichodesmium*.
