Dataset Description

BCO-DMO Note: Although the status of these data has been set to Final and Validated, they have not been QC'ed 27March2013

Multi year underway data 2003-2010

These data include version 2 data as submitted.

Version 2 NOTES: Version 2 means that Data set has been updated in part of the new data added: (1) 2010 cruises; (2) Previously unavailable Whole cell counts from the previous cruises; and (3) Previously unavailable data for Underway stations (mostly date, location).

Data files newly created or updated in this version are indicated with "_v2" in file names.
(BCO-DMO Note: for original files as contributed)

Date of creation: 5/12/2011.

Matlab code used for data merging: GM_read_alex_nuts_BTL_v2.m

Sometimes all the data in the Underway file is unavailable at the time but is known to be sampled. In this case the file is still presented but empty (headers only).

No data reported for the following cruises:

- 2003/OC391
- 2005/OC412
- 2005/TI096
- 2005/TI105
- 2005/TI112
- 2006/TI171

- 2006/TI177
- 2006/TI180
- 2006/TI184
- 2006/TI185
- 2008/TI326
- 2010/EN476
- 2010/OC460
- 2010/OC467

Data not sampled or lost are indicated with NaN.

Data not yet available, but that might be contributed in the future are indicated with the "waiting" flag=-9.99.

Funding:

The cruises from 2003-2004 were supported by NOAA grant NA160P2785 (MERHAB).

The cruises from 2005-2010 were jointly funded:

NSF grant OCE-0430724 and NIEHS grant 1P50-ES01274201 (Woods Hole Center for Oceans and Human Health)

NOAA grant NA06NOS4780245 (GOMTOX)

Data Processing Description

BCO-DMO Processing/Edits

- Generated from data in original file "GOM_GB_nuts_TS_Alex_v2.tar.gz" contributed by Olga Kosnyrev

- Awk routine "GoMEunderway2csv.awk" generated to convert bottle ".txt" files to BCO-DMO .csv files

[[table of contents](#) | [back to top](#)]

Data Files

File
Underway_Data.csv (Comma Separated Values (.csv), 59.39 KB) MD5:815b66492c03a7d1661678d8a0e362e9 Primary data file for dataset ID 3359

[[table of contents](#) | [back to top](#)]

Parameters

Parameter	Description	Units
station	Underway station numbers are indicated with ".1" and ".3" which mean: ".1" - UW between CTD stations; ".3" - UW at the CTD location.	x.x
date	date (GMT)	YYYYMMDD
time	time (GMT)	HHMM
lon	Station longitude (West is negative)	decimal degrees
lat	Station latitude (South is negative)	decimal degrees
depth_nominal	nominal depth	m
Alex	Number of Alexandrium fundyense cells	cells/L
Alex_Live	Number of live Alexandrium fundyense cells	cells/L
Flag	Flag "NOTE" values and meaning: 1 - regular data; 2 - Alex multiple samples averaged; 3 - Nuts multiple samples averaged; 4 - Alex and Nuts multiple samples averaged; 5 - Alex Live multiple samples averaged	integer
cruise_id	Official cruise id	text

Description	<p>GOMTOX: Dynamics of Alexandrium fundyense distributions in the Gulf of Maine: an observational and modeling study of nearshore and offshore shellfish toxicity, vertical toxin flux, and bloom dynamics in a complex shelf sea. The main scientific research objective is to determine the interannual and interdecadal distribution of Alexandrium fundyense (red tide) cysts in the Gulf of Maine and Bay of Fundy and onto Georges Bank as time permits. This will be the 3rd annual cyst survey onboard the R/V Oceanus. At each station, a Craib Corer will be deployed to sample surficial bottom sediments (top 3cm). Cores will be sectioned and processed on the way to each station. Science activities planned include Craib coring and CTD casts. Project Information

Investigations of *Alexandrium fundyense* dynamics in the Gulf of Maine (ALEX-GoME)

Coverage: Gulf of Maine

Investigations of *Alexandrium fundyense* dynamics in the Gulf of Maine

Project Summary

Harmful algal blooms, commonly called "red tides" or HABs, are a serious economic and public health problem throughout the world. In the U.S., the most serious HAB problem is [paralytic shellfish poisoning \(PSP\)](#), a potentially fatal neurological disorder caused by human ingestion of shellfish that accumulate toxins as they feed on dinoflagellates of the genus *Alexandrium*. These organisms cause human illness and death due to PSP, repeated shellfish harvest quarantines, and the mortality of fish and marine mammals. This phenomenon, which affects thousands of miles of U.S. coastline and numerous fisheries resources, has expanded dramatically in the last two decades, especially in the Gulf of Maine. ECOHAB-GOM is a project that addresses several fundamental issues regarding *Alexandrium* blooms in the Gulf of Maine: 1) the source of the *Alexandrium* cells that appear in the fresh water plumes in the western Maine coastal current (WMCC); 2) *Alexandrium* cell distribution and dynamics in the eastern Maine coastal current (EMCC); and 3) linkages among blooms in the WMCC, the EMCC and on Georges Bank. Utilizing a combination of numerical modeling, hydrographic, chemical, and biological measurements, moored and drifting current measurements, and satellite imagery, we are working to characterize the structure, variability and autecology of the major *Alexandrium* habitats in the Gulf of Maine.
