Instruments

Dataset-specific Instrument Name	MOC1
Generic Instrument Name	MOCNESS1
Dataset-specific Description	333 micron mesh, 9 nets
Generic Instrument Description	The Multiple Opening/Closing Net and Environmental Sensing System or MOCNESS is a family of net systems based on the Tucker Trawl principle. The MOCNESS-1 carries nine 1-m ² nets usually of 335 micrometer mesh and is intended for use with the macrozooplankton. All nets are black to reduce contrast with the background. A motor/toggle release assembly is mounted on the top portion of the frame and stainless steel cables with swaged fittings are used to attach the net bar to the toggle release. A stepping motor in a pressure compensated case filled with oil turns the escapement crankshaft of the toggle release which sequentially releases the nets to an open then closed position on command from the surface. -- from the MOCNESS Operations Manual (1999 + 2003).

Deployments

All-112-28

Website	https://www.bco-dmo.org/deployment/473669
Platform	R/V Atlantis II
Report	http://bcodata.whoi.edu/Wiebe_Vents/ATII-112-28_cruise_rpt_Wiebe.pdf
Start Date	1985-07-24
End Date	1985-08-03
Description	Zooplankton from the Guaymas Basin deep-sea vent field were collected with a 1 m ² MOCNESS to examine the distribution of total standing stock, taxonomic composition, size-frequency distribution of zooplankton, and the species composition of calanoid copepods.
