

Data Management Plan

Collaborative Research: Analysis of Continental Shelf Ecosystems: Food Web Structure and Functional Relations

This project will produce only numerical modeling results. It will not carry out any sampling of the ocean, nor will it create new data products (such as atlases, etc.). All model inputs and outputs will of course be preserved indefinitely in the care of the PI who carried out the particular run. We want to be completely compliant with the current NSF Ocean Sciences Sample and Data Policy

http://www.nsf.gov/publications/pub_summ.jsp?ods_key=nsf11060).

Thus, all model codes, inputs, and outputs will be archived with the Biological and Chemical Oceanography Data Management Office (BCO-DMO) at no cost to this project. Archival will occur within one year after a given model run takes place. This arrangement has already been discussed and approved by Bob Groman from that office.
